Arduino jupyter notebook

Code arduino pour faire clignoter une LED :

```
int ledRed = 13; // LED broche 13 void setup(){ // Ouvre la connection série. Serial.begin(9600); pinMode(ledRed, OUTPUT); } void loop(){ // Selon état s'éteint ou s'allume if(Serial.available() > 0){ digitalWrite(ledRed, HIGH); delay(1000);
```

Merci à doug.blank@gmail.com pour son aide et le jupyter notebook

digitalWrite(ledRed, LOW); delay(1000); Serial.flush(); } }

```
